# Ian *Yen*

ianyenyh@gmail.com · (206) 561-6435 · ianyen.net · Try a prototype I built

Senior Product Designer with 7 years of experience shipping cross-platform products to millions of users. I'm at my best in the messy middle: turning a fuzzy idea into a working prototype, putting it in front of real people, and shipping what actually works. I care most about AI products people can trust, even when the model is uncertain.

## EXPERIENCE

UX Designer @ **Google** · Dec 2021 - Present · New York City

Agentic Messaging (current)

- Shipped Agentic Messaging in RCS for Gemini end to end: onboarding, collaborator-adding, the agent's contact allowlist, and the authorization flow, from concept to shipped product.

People Platform - Contact Intelligence

- 3.9M daily impressions and 2.1M contacts saved daily: defined the Personal Intelligence UX in Gemini, using a human-in-the-loop framework for the MCP server so sensitive contact data surfaces without eroding trust.
- Fewer contact-overwrite errors: built an end-to-end AI UX evaluation framework covering 150+ edge cases, with an in-product dismissal loop that turns drop-offs into failure taxonomies for model tuning.
- Turned an ambiguous one-year AI mandate into shippable features: reframed automation as agentic assistance with users in control, then shipped Gemini x Contacts sync, Gmail AI extraction, and Magic Cue, validated through UXR and secured for the roadmap.

Ecosystem Growth - Sharing (ShareKit / Splitti)

- 20% lift in outbound share volume across adopting apps: launched a customizable sharing framework that layers on the system ShareSheet. NotebookLM shipped the turnkey version — 0-to-1 artifact sharing with 73% share completion.
- Designed, not launched, for Gemini prompt sharing: after research showed a configured sharing version felt too busy, designed an Extended tier with prompt editing before sharing. Gemini deprioritized the feature before launch, so no launch metrics are claimed for it.

Contacts

- 27–32% lift in data entry and 29–37% improvement in usability scores: redesigned the Contacts data entry flow across mobile, Wear OS, and desktop, resolving the tension between information density and usability without losing complexity.

UX Designer @ **Philips** · Sep 2020 - Dec 2021 · Seattle

Sonicare app

- Led Sonicare app design end to end - Bluetooth connectivity, in-app sensor experience, and app-store presence - for a 16-country launch, on schedule.
- Turned raw brushing sensor data into a coaching dashboard people act on: average brush time rose 34 seconds and brushing frequency rose 22%. Play Store rating rose 2.8 → 4.2 and App Store rating 4.5 → 4.8, the highest in the product's history.

## SKILLS & TOOLS

- Design: Figma, component systems, interaction design, design systems · Code prototyping: HTML, CSS, JavaScript · AI-native workflow: Google AI Studio, Figma Make, Claude, Antigravity

## EDUCATION

MS, Health Informatics · Aug 2020

**Cornell University** · GPA 4.01 · Academic Excellence Award

BA (Hons), Global Health & Social Medicine · Aug 2018

**King's College London** · GPA 4.0 · First-Class Honours
