Senior Product Designer with 7 years of experience shipping high-impact products to millions of users. I thrive in fast-paced, ambiguous environments, specializing in taking abstract ideas from 0-1 by prototyping directly in code alongside engineering teams. My process is built on rapid iteration - shipping functional prototypes quickly, validating them with real people, and refining the final product based on authentic user feedback.

EXPERIENCE

UX Designer @ **Google** · Dec 2021 - Present · New York City

Agentic Messaging team

- Owned end-to-end design of the Agentic Messaging experience in RCS for Gemini, including onboarding, the collaborator-adding flow, the agent's contact allowlist, and the authorization flow for enabling it, taking it from concept to shipped product

Contacts team

- Defined the Personal Intelligence UX in Gemini. This included designing how AI surfaces sensitive contact data while preserving user trust with a Human-in-the-Loop framework for the MCP server. Result: 4M DAU, 152k daily prompts and 80% CSAT Favorability.
- Translated high-level automated contact curation goals into 3 shipped features by facilitating a rapid design sprint with AI prototyping tools. Validated concepts via UXR to secure stakeholder approval for the 2026 product roadmap.
- Spearheaded the end-to-end design and roadmap for Contacts on Wear OS (Pixel Watch), balancing client and user priorities, refreshing the visual design system, and designing interactive Contacts widgets.

Sharing team

- Designed and deployed a 0-1 modular Sharing interaction framework integrated with system ShareSheet across NotebookLM, Maps, and Gemini, driving a 20% increase in outbound share volume. Developed an AI-assisted simulation tool to stress-test components and streamline cross-system design translation.
- Overhauled the multi-device Contacts data entry forms (mobile, Wear OS, desktop), balancing complex data structures with intuitive UX to achieve a 27–32% increase in data entry completion and a 29–37% lift in usability scores.

UX Designer @ **Philips** · Sep 2020 - Dec 2021 · Seattle

Sonicare app

- Led design for the Sonicare app experience, from the physical device bluetooth connectivity, in-app sensor experience, to app store presence, for a 16-country launch
- Designed the coaching dashboard that turns raw brushing sensor data into feedback people act on. Average brush time increased 34 seconds; brushing frequency increased 22%
- App rating moved from 2.8 to 4.2 on Play Store and 4.5 to 4.7 on App Store post-launch (the highest in the product's history)

SKILLS & TOOLS

- Code prototyping: HTML, CSS, JavaScript
- AI-native workflow: Google AI Studio, Figma Make, Claude, Antigravity
- Design: Figma, component systems, interaction design, design systems
- Languages: English, Cantonese, Mandarin, Japanese

EDUCATION

MS, Health Informatics · Aug 2020

Cornell University · GPA 4.01 · Academic Excellence Award

BA (Hons), Global Health & Social Medicine · Aug 2018

King's College London · GPA 4.0 · First-Class Honours
